

# Building tools at the edge of *product, place,* and people.

A small archive of work across AI-native SaaS, GIS research, and full-stack engineering — each project chosen for its clarity of intent.

|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|-------------------------|-------------------------|---------------------------------|
| 01                                                                                                                                                             | OneKit                  | AI-Native SaaS Suite    | Co-Launch · E-Sign Lead | 2026                            |
| Co-launched an AI-native SaaS product suite with an integrated knowledge base. Owned end-to-end development of the E-Sign tool — from architecture to release. |                         |                         |                         | <a href="#">VISIT PROJECT</a> ↗ |
| 02                                                                                                                                                             | Data-Driven Communities | GIS · Urban Planning    | Cartography · Research  | 2026                            |
| A GIS portfolio analyzing urban planning and equity through ArcGIS Pro and StoryMaps — translating spatial data into civic narrative.                          |                         |                         |                         | <a href="#">VISIT PROJECT</a> ↗ |
| 03                                                                                                                                                             | Filipino Artist Gallery | Static Site · Editorial | Design · Build          | 2026                            |
| A static gallery built in vanilla HTML, CSS, and JavaScript — a quiet stage for contemporary Filipino musical artists.                                         |                         |                         |                         | <a href="#">VISIT PROJECT</a> ↗ |
| 04                                                                                                                                                             | Community Hot Spots     | Full-Stack · GIS        | Engineering             | 2026                            |
| A full-stack GIS application mapping third places across the Inland Empire — built with JavaScript and Supabase.                                               |                         |                         |                         | <a href="#">VISIT PROJECT</a> ↗ |

# Software engineer working across *code, place, and people.*

## EXPERIENCE

Software Engineer Intern · AI Squads  
IRVINE, CA

FEB 2026 — JUN 2026

- Implemented AI PDF detection with Claude Vision to auto-place e-sign fields, reaching 70% placement accuracy.
- Engineered an IDP pipeline with multimodal LLM bounding boxes, cutting manual e-sign field placement by 40%.
- Automated tracking for 400+ users via Docker, Supabase, PostgreSQL, and TypeScript as a founding SWE intern.
- Migrated web E-Sign and content tools to desktop with React/Vite; shipped 5 AI-powered productivity tools.

AI Teaching Assistant · Campus.edu  
SACRAMENTO, CA

DEC 2025 — MAR 2026

- Authored 5-minute tutorials guiding students through migrating Replit projects to GitHub.
- Partnered with 7 adjunct faculty to align student learning objectives and weekly office hours.

Section Leader · Stanford University · Code in Place  
STANFORD, CA

APR 2025 — JUN 2025

- Led 10+ students through 8 weeks of Stanford's Intro to Python course.
- Collaborated with 1,400+ volunteer instructors supporting 20,000+ learners worldwide.

## EDUCATION

B.S. Computational Mathematics · University of California, Riverside  
Coursework across GIS, full-stack web development, AI, data structures, relational databases, linear algebra, numerical analysis, and game theory.

## TOOLKIT

### LANGUAGES

Python · C# · C++ · JavaScript · TypeScript · SQL

### TOOLS

Docker · Supabase · PostgreSQL · Git · Azure · Figma

### AI

Claude Code · OpenAI · Antigravity · Replit · v0 · Bolt

## CONTACT

Open to collaborations,  
conversations, and  
*quiet introductions.*

### ABOUT

Product and engineering across AI-native software, geographic information systems, and civic technology.
